

"We made the switch from the 797-6 as our stock/go-to sensor, especially for mounting on bearings in our paper machines, to the HT787A in 2015. We have found the HT787A to be the same reliable 100 mV/g accelerometer as its predecessor in really tough environmental conditions—hot, wet, chemicals, etc. We're thankful to the Wilcoxon team for informing us of the upgrade and partnering with us to continue to improve equipment reliability and lower maintenance costs."
